SMART FASHION RECOMMENDER APPLICATION

BATCH MEMBERS:

1. A. KAVITHA   (953119104019)

2. V. KAVITHA   (953119104021)

3. N. NAVINA   (953119104033)

PROBLEM STATEMENT

A fashion recommendation system is a system that is programmed to predict future preferable items from a large set of collections. The biggest issue facing recommender system is that the user needs to navigate several screens for booking products. In this project we create a chatbot by which the user can directly chat to that chatbot regarding the products.
